Working at all levels

Geneva Rock, W.W. Clyde work together at Point of the Mountain
We must be part of progress

It's official: We are well into our work season. Projects that were buttoned up for the winter are opening up again, and new ones are starting. Now you have to ask yourself if you're ready. If the answer is no, your union offers incredible training in every state of its jurisdiction. Just pick up a phone and give your training center a call. (I've listed the numbers below.)

Trainings like the one the International Union of Operating Engineers (IUOE) recently held for pipeline stewards only makes you more marketable for when you get that dispatch call. I attended some of these trainings and was glad to see the good attendance. Let's keep it up.

Speaking of pipeline work, you'll notice it has increased lately, so any pipeline training you may have had was worth it! Fresno District 50 and Yuba City District 60 have some pipeline projects that will be highlighted here. Stay tuned.

Regarding the 85 billion Keystone XL Pipeline (the 1,200-mile crude-oil pipeline from Canada to Nebraska), I want to assure you that we are working closely with the IUOE to make certain the project begins as soon as possible. Only a few key steps in the approval process remain, but environmental groups continue their illogical opposition. Visit our website at www.oe3.org more information.

It is unfortunate that some environmentalists will uphold their agendas above jobs that put food on the table. District 10's Willits Bypass has met much fringe opposition from these people, whose demands have been met (2,000 protected acres, creek restoration, etc.) yet they still continue to harass our workers. My hats off to the members who went to all the city council meetings and rallies to get this project going and to those who are working with this harassment going on. Progress happens whether you like it or not. We have to be a part of it to survive. The Willits Bypass will get built just like the Devil's Slide. (It was completed in late March.)

The union battle will continue. There will always be those who try to take away what is ours, whether it's by wrongfully operating our equipment or trying to stop a project. But our solidarity is our weapon. Use it. Get involved in your union and speak up when you see things going on at your job sites that you know are not right. Together, we can get it right.

Congratulations to all of you who successfully completed the big Transbay Transit demolition in District 01. According to San Francisco Mayor Ed Lee, workers completed 55,000 hours of labor without any accidents. That's a stellar record, thanks to you! Now that the demo is done, more work to the tune of close to $200 million will pour in for the new Transit Tower, which is just part of the massive billion-dollar Transit Center. This project will employ Operating Engineers for many, many years. Our successful track record on the demo only emphasizes the skilled nature of our craft. I thank all those involved. There is more work ahead!

Remember, attending your District Meeting or Retiree Meeting provides you the opportunity to get your questions answered regarding the Pension changes, Health and Welfare, the new Master Construction Agreement or anything else that may concern you. If you can't make it to a meeting, call your hall for answers. We work for you!

Also, summer is right around the corner, so please consider getting together with your district by attending your picnic. The officers hope to see you soon at one of these events. A list of dates and locations for these can be found on pages 11, 26 and 27.

Local 3 training centers
California: (916) 354-2029
Nevada: (775) 575-2729
Utah: (801) 598-9878
Hawaii: (801) 847-5523
This month back in 1969

In the May 1969 edition of Engineers News, Local 3’s Technical Engineers Department reported an increase in hours and a positive work picture. Members were also excited about the new, “high-tech” instruments being used in the field. Then a job steward, Retiree Timothy J. Burne was pictured putting “the new Electrotape through its paces” on a project in Calaveras County. Resembling a large, 1980s stereo speaker attached to an even larger tripod, the device allowed operators to measure distances varying from 400 feet to more than 4-½ miles.

This was a big deal at the time, but oh how things have changed.

These days, GPS allows surveyors to read great distances from a device that communicates with satellites orbiting 12,500 miles above the Earth. There’s even new equipment that incorporates the three different satellites used around the world and, when fully implemented, will allow greater numbers of satellites to be used, resulting in higher accuracy. Today, surveyors also use 3D laser scanners, and soon, gadgets like Google Glass will allow us to see distances and get directions by just speaking a command.

There’s no doubt we’ve come a long way since the ’60s and ’70s, but just like in 1969, the Technical Engineers Department is once again seeing an uptick in hours. (See page 18.)

Other signs that times have changed can be found in the May 1969 Swap Shop section, where a 1966 Chevelle (only three years old at the time) was being sold for $2,000! The asking price for a black-and-white television that “needs switch” was $20, and an Underwood typewriter was being offered for $30.

Read between the lines

Hasn’t your mother ever told you not to believe everything you read? In today’s politically charged environment, there is so much bias in the media and such a drive to sell newspapers and attract viewers that fact-checking is no longer required and spin is as common as dust.

I say this because a recent article published in The Wall Street Journal regarding multi-employer pension plans has created a stir among the membership, and I want to address the facts. The article states that a group of unions and employers have proposed undoing certain guarantees put in place by federal law that would cut benefits to existing retirees.

While this “news” article is spun at the beginning to make it sound like this affects all multi-employer pension plans (and sell newspapers), if you read the entire article, you will see that this proposal only affects “150 multi-employer plans … headed toward insolvency.” The proposal seeks to rewrite the Employee Retirement Income Security Act (ERISA) of 1974 for those insolvent plans “so that benefits for people who are already retired can be reduced.”

Let me assure you that we are not one of those 150 plans in question, and therefore, none of this proposal affects us. As we have mentioned in past editions and at union meetings throughout our jurisdiction, our Pension is funded with $3.1 billion. Our Pension is solvent. The recent changes we made, which are available online at www.oe3.org and were mailed to you in two separate letters, were to avoid insolvency. In fact, our Pension Plan is projected to go into the Green Zone by 2025. Only those plans that are in critical status and have been taken over by the Pension Benefit Guaranty Corporation (PBGC), meaning the government, are at risk of being impacted by this proposal.

Please be aware that The Wall Street Journal is run by media mogul Rupert Murdoch, a well-known, right-wing advocate. It would make sense that his newspaper would publish an article designed to inflict fear in union pensioners. This is why it’s so important to research the facts. Pay attention to what you read, but don’t always believe it. Read between the lines. If you see or hear something that doesn’t sit right with you, give us a call.

We officers appreciate your questions every time, because this is how we all learn. This is how we get on the same page. So thank you to the membership for bringing this article to my attention. And please do note that, though charged with frightening claims about the security of retirees’ pensions, it does not affect us at all.

For any questions you may have about the Pension or your other union benefits, please call the Fringe Benefits Service Center at (800) 532-2105 or the Trust Fund Office at (800) 251-5014.
For some, Project Headlands is a dream job. The multi-million-dollar project designed to improve safety along Alexander Avenue near Sausalito along with other improvements to the Marin Headlands National Park is located along some of the most beautiful stretches of coast, with breathtaking views of the Golden Gate Bridge and miles of biking/hiking trails.

“I've taken hundreds of pictures,” said Maggiora & Ghilotti, Inc. Foreman Mike McClure. The dozer operator is one of several foremen on the project and also one of several generations of Local 3 members. His view is a direct line to the ocean, as he and Compactor Operator Brooke Carter restore the park’s old Fort Cronkhite Parade Ground Quarry to its original state.

However, for Excavator Operator Steve Hubert, the job is a bit more terrifying. He has worked in conjunction with fellow Excavator Operator Dennis Kapsas and Dozer Operator Lee Montenegro at dizzying heights above Alexander Avenue.

“I don't like to swing it [the excavator] around that way,” said Hubert, as he laughed nervously and gestured to the far drop below.

“It's a little freaky,” said Montenegro. “The road is barely wide enough.”

When finished, this crew will have created a rock catchment at the base of the hill to protect traffic and widened the road for pedestrians who often bicycle across the Golden Gate Bridge and into Sausalito by way of a road that only gives them about 1 or 2 feet to maneuver.

Main contractor Maggiora & Ghilotti, Inc. will widen this road by 4 feet, add an MSE wall, improve sightlines, turnouts and general safety in the area north of the Golden Gate Bridge and provide maintenance and upgrades within the Marin Headlands National Park, explained company owner Scott Ghilotti.
"The park [Fort Cronkhite section] gets 5,000 to 10,000 visitors a day during peak season, many from school groups," he said. "We will get them off the street completely."

Other improvements include adding a new parking lot to the Marine Mammal Center, expanding maintenance yards in the Fort Cronkhite area and reconstructing and resurfacing new roadways throughout the park.

Work began in April and should continue well into 2014.

"We have to complete this part [widening Alexander Avenue] by June of this year because of America’s Cup," he said.

But it shouldn’t be a problem for this crew, since the majority of operators have worked for the company for many years.

"I’ve got my core people," said Ghilotti. "We’re ahead of schedule."

Many of the operators onsite are seasoned veterans, such as Blade Operator Sam Vassey.

"He’s one of the best blademen in the industry," said Ghilotti.

Several apprentices are getting schooled by the best, including Robert Kaehler and Dan Marsili.

"My whole family does this," said Marsili.

Whether they’re on their first job as an apprentice or a company veteran, these operators are getting the job done with terrifying and beautiful views.

**Project Headlands by the numbers**

- Peak number of operators onsite: 20
- Base rock coming in: 18,000 tons
- Asphalt backfilled: 20,000 tons
- Project area: 40,000 yards
- Value of project’s second phase: $11.4 million
Explaining the Pension changes

I want to thank everyone once again for attending our March Semi-Annual. It was a great turnout, and we could not have asked for better weather. For those who didn’t attend, the main topic that day was the changes to our Pension. By the time you read this, you all should have received a two-page letter from Local 3, which was presented at the Semi-Annual in a Power Point presentation, along with a multi-page letter from the Trust Fund.

The letter from the Trust Fund is long and can be confusing, which is why we showed the Power Point presentation and talked about the changes at the last round of District Meetings, explaining how they will affect our members. It’s important to understand that we were only able to make the changes we did by going into the Red Zone and that by doing this, if all assumptions are met, we will get our Pension on a faster track to recovery.

The Power Point presentation showed that we have more money in the Fund today than we had at the end of 2008 as well as a higher funded percentage than 2011. However, the funded standard account or credit balance, which is the indicator of our Fund’s performance as required by the Pension Protection Act (PPA), is what caused us to go into the red. Unlike the funded percentage, which is really straightforward, the credit balance is a confusing mathematical-actuarial assumption that has many moving parts and, according to our actuary, is a very poor indicator of a fund’s status.

I have spent a lot of time and exchanged countless e-mails with our actuary in order to understand how the credit balance works and how to explain it to the members. The best explanation I have is that any return over 7.5 percent helps the credit balance, and any return under 7.5 percent hurts the balance.

For example, say our Fund made an 8.5 percent return – 1.0 percent over 7.5 percent. With our Fund at $3 billion, 1.0 percent equals $30 million. However, we can only recognize one-fifth of the $30 million, or $6 million, and that $6 million gets amortized over 15 years. Considering interest, in the end, you only recognize $680,000 to the credit balance for the first year. After five years, the credit balance will then add $3.4 million every year to make up that $30 million excess return.

Today, we’re still seeing the negative impact of the 2008 losses on the credit balance. Again, the money ($3 billion) is in the Fund, and the credit-balance numbers are used as an indicator. If these numbers go negative four years after a fund certifies, this puts it in the Red Zone, even if the fund is actually better funded than the year before. If we didn’t make any changes, our credit balance was going to go negative within a four-year period. That’s a very basic explanation.

We officers are not actuaries. We hire professionals who we believe have the best knowledge to work on our Funds. We do everything we can to bring the information to the members so they can better understand what’s going on with our Pension and how the rules in the PPA, by law, affect us. Hopefully, the worst times are behind us. Again, we have had to make tough decisions, but today, work is coming back, our Health and Welfare Funds are growing and the Pension Fund has more money than it did in 2008.

We will continue to make changes when necessary, so the Pension will be here for every Local 3 member when he or she decides to retire. We will also continue to keep you informed.

Be safe!

Making elections successful – Local 3’s Volunteers of the Year

Attention! Elections are coming up.

In a number of our districts in all four states, there are upcoming local, municipal elections taking place this month and next. If your district office calls and asks for help with an election, step up to the plate and say, “Yes!” By giving just two to three hours over one or two weeks, we can collectively make an impact on an election. You’ll also earn great awards.

As you’ve heard from me in this column and from the officers and district reps. at your District Meetings, when lots of members volunteer just a little bit of their time, we have a big impact on election outcomes at the local, state and federal levels. Typically, a member (and sometimes their family members) will come to the Hall to phonebank for just a couple of hours during a weekend or walk a precinct to educate other union members for a few hours on a Saturday.

Believe me, these efforts get big results. Last year, we defeated anti-union Proposition 32 in California and got labor-friendly candidates elected to local and state positions in all four states. We had more than 1,000 members volunteer their time in 2012, and that’s something to be proud of!

Most folks helped out once or twice, but some folks went above and beyond the call of duty and gave their time over and over again. Some folks volunteered more than 100 hours! We had active members, Retirees and apprentices participate. It takes everybody’s help to see results.

At the quarterly District Meetings beginning this month, we will be giving one member from each district a Volunteer of the Year Award in recognition of the outstanding contributions made to Local 3’s Voice of the Engineer (VOTE) program in 2012. Those chosen represent the best of the best in union volunteerism. They truly understand the power of participation. Please attend your District Meeting and celebrate with the rest of Local 3, as we acknowledge the selfless efforts of these model volunteers.

To those members listed below, we truly thank you. Your dedication only strengthens your union.

Local 3’s 2012 Volunteers of the Year

District 01 Desheng Bian
District 04 Joseph “Tony” McGrath
District 10 Joel Lanstra
District 11 Michael Smith
District 12 Frank Sunde
District 17 Alan Kumalae
District 20 Lou Trujillo
District 30 Rod Barney
District 40 Harry Herkert
District 50 Justin Barnard
District 60 Damien Geedis
District 70 Curtis Brown
District 80 Dan Kern
District 90 Michael Busch

Again, on behalf of all of our Local 3 members, officers and staff, I want to thank these members for their outstanding contributions. Just remember: Next year it could be you!
Classes begin and end at the Ranch

Supplemental Related Training (SRT) classes have come to an end, and the five-week Probationary Orientation Period (POP) classes have started.

Forty-two apprentices and journey-level operators attended the March 18-April 19 SRT classes, which included training for backhoe, blade, equipment GPS, excavator, gradechecking, crane 3, loader and paving.

The first five-week POP classes were held at the same time, with 65 trainees in attendance.

POP classes are also going on right now (ending May 24), but there is time to sign up for future ones. The next sessions are May 28-June 28 and July 8-Aug. 9. These classes are scheduled anywhere from six to eight weeks in advance, so please don’t wait until the last minute to send your apprenticeship applications to the Rancho Murieta Training Center (RMTC). For more information on classes and/or applications, please call (916) 354-2029.

I would like to thank all the employers, superintendents, foremen/forewomen and journey-level operators for their commitment to train apprentices. They are the future of our industry and will be the ones to carry on the Operating Engineers tradition long after we retire.

I would also like to thank the apprenticeship coordinators and training-center staff for all their hard work and dedication throughout the year!

Have a safe work season.

There are a lot of Local 3 functions coming up, from picnics to District Meetings. Which one is your favorite?
**PERB files complaints ... and a short goodbye**

On the eve of Proposition B going to the voters in San Jose, several labor organizations filed charges against the city with the Public Employment Relations Board (PERB) for many reasons, including failing to negotiate in good faith. This past week, the PERB issued four — that's right, four — complaints against the city.

The fact that the complaints were issued is not what is surprising. What befuddles me is San Jose Mayor Chuck Reed's attitude regarding the complaints. He called the PERB irrelevant, and then in an interview with a local radio host, he replied to a question about these complaints by saying he expected nothing else, since the PERB is made up of pro-labor board members.

Along with everything else the mayor hasn't gotten correct over the past months, he blew it on this one too. The complaints were not issued by the board members but by attorneys who are employed by the PERB to investigate allegations of this nature. They make a decision on the facts presented by either filing a complaint or issuing a warning letter advising that the allegations cannot be sustained.

As I have said in the past, the citizens of San Jose and the dedicated employees serving them deserve more than this arrogant attitude.

Enough about Reed! There are more pleasant topics to talk about. For instance, effective June 1, Business Rep. Rick Davis will be taking over my position as Public Employee Division director, due to my retirement effective May 31. Davis has been with Local 3 for almost eight years, working primarily out of the Sacramento District office. Like a lot of our business representatives, Davis comes from a law-enforcement background and was involved as a Police Officers Association (POA) board member. He has worked with the Service Employees International Union (SEIU) and the Police Officers Research Association of California (PORAC) as its training manager.

While working with Davis over these past years, I have found him to be dedicated to the members he represents and to the union itself. He is a no-nonsense kind of guy who will tell you not what you want to hear but the truth. He is well-thought-of throughout Local 3, and I know he will do a great job.

As for myself, I leave this position and my years of service with the union with many fond memories and friends. To the membership I have had the honor and privilege of representing, the staff and the officers of this great union, I wish you all the best and thank you for being a part of my life and allowing me to be a part of yours. Best wishes, and God bless!

---

**Coalition unites many with common cause**

By Michael Eggener, business representative

With the city of Stockton’s bankruptcy case continuing, a group of unlikely allies has come together, creating a labor coalition between all Stockton employee bargaining units. The Stockton Labor Coalition represents about 1,000 employees in nine separate groups who are represented by five representatives. The coalition’s goals include working together on common issues, such as pension and medical benefits. Its members share information and watch out for each other.

The idea of the coalition came from Senior Business Rep. Joe Santella, a former city of Stockton employee, and Stockton Fire Captain David Macedo. It became a reality during the Assembly Bill (AB) 506 pre-bankruptcy mediation. Santella has been the driving force and lead negotiator for the Local 3 bargaining groups during this bankruptcy process. (Local 3 has four separate bargaining units within the city of Stockton.)

The Stockton Labor Coalition recently held a strategic planning session at the District 30 Hall to discuss communication between labor groups and with the city, along with getting through bankruptcy and moving down the road to recovery.

In early April, a judge declared that the city of Stockton was eligible for bankruptcy. At the time of this writing, specifics are still unclear, but the case may have huge ramifications for all public employees throughout the United States.

For more information on this and other union business, please keep in contact with your district and your union rep. Attend your District Meetings and get to know your brothers and sisters at your District Picnic.
Finally – positive negotiations!

By Mike Minton, business representative

The District 60 Public Employee Division is busy with negotiations for successor Memorandums of Understanding (MOUs). It appears the economy has improved, so we expect things to go well. Instead of just trying to hang on to what we already have and dealing with employee takeaways, we are negotiating benefit and salary increases.

We just concluded negotiations with the Linda Water District, which ended with a multi-year contract and a Cost-Of-Living Adjustment (COLA) each year with a minimum yearly salary increase set at 2.5 percent. If the COLA is higher, employees would receive a bigger increase. It is also worth noting that we gave nothing up in the contract.

The Olivehurst Public Utility District also appears to be on the road to economic recovery. The district just brought its fire department back, after it was removed two years ago due to budget cuts. Now the district has three firefighters for at least two years.

We are in the process of concluding negotiations with the city of Marysville, and at the time of this writing, it appears we will settle with longevity-pay increases of 1 percent at 10, 15, 20 and 25 years. City employees have never had a longevity increase before. We also re-worked health-insurance benefits so employees with families can receive close to what they had at a much more affordable rate.

The Marysville Joint Unified School District concluded with a good contract, and by the time you read this, we will have taken it to the members for ratification – a first in many years. We settled with a multi-year contract, which provides a 3.8 percent salary increase, a boot allowance and a drop from 15 to 12 years for the time it takes to reach maximum accrual for vacation.

I hope this trend continues with the other eight bargaining units that I will be opening negotiations for soon.

Don’t shoot the messenger

By Gregory C. Ramirez, business representative

It’s hard to believe we are already in May. Where did the time go? The negotiation season is in full swing, and at the time of this writing, I’m expecting contentious negotiations in Sierra County. Last year, the county moved to impose a contract, and we almost went to the end of the fact-finding process. Fortunately, we were able to agree on a mediated contract. Unfortunately, Sierra County officials’ attitudes toward employees and its financial affairs continue to spiral down, so we have an even tougher environment in which to negotiate.

Negotiations in El Dorado County have also started, and I am encouraged by the relationship that Local 3 has been able to develop with the county’s new Human Resources (HR) staff. Over the past 10 months, Local 3 has been able to work with HR to resolve several issues, and we continue to work well together. Hopefully we can carry that spirit of cooperation to the negotiation table for the Corrections, Probation and Trades and Crafts bargaining units. In comparison to the other counties I represent, El Dorado County is the most complex, because the members work at different sites and have different schedules.

As you wait to hear from the union and your employee representatives about what’s going on during bargaining, try to keep in mind that your bargaining-team members are volunteers; they aren’t paid to sit at the table, strategize, agonize, analyze and bargain on your behalf. They are at the table representing you because they’ve made a commitment to you and Local 3 to try and advocate for shared goals and principles.

When talking with your representatives, treat them with respect, even when they’re sharing information that you don’t agree with or don’t find interesting. (Don’t shoot the messenger!) Keeping communication between you and the bargaining team as comfortable and professional as possible will ensure that you are informed of what is happening.

The goal of each bargaining team is to negotiate the best possible contract and then let the membership vote. Remember, our strength at the bargaining table is largely dependent on the unity and participation of each bargaining group.
OE Federal: The perks of membership

Choosing a financial institution that you can trust is difficult in today's world. Therefore, we are honored that as a member of OE Federal, you have placed your trust and financial well-being in us. For that reason, we make it our top priority to ensure that the products and services we offer our members are for real-life needs.

With summer right around the corner and plans that are sure to have you and your family out in the fresh air, the last thing you need to worry about is paying unreasonable fees or payments on loans that have sky-high rates. OE Federal has a variety of accounts that can help ensure you and your family make the most of the summer season.

Checking accounts. You see ads for free checking all the time, but do you really have free checking? Unfortunately, most banks have hidden fees tied to their free checking accounts. At OE Federal, free checking is truly free, with no hidden fees or surprises. We offer all the conveniences you need, including free online banking and mobile banking. Visit www.oefcu.org for more information.

Youth checking. Youth accounts are a great way to teach children the importance of money-management. By providing your children with the freedom and tools to manage their own funds, they can learn how to become financially responsible adults. Open a youth account for your child or grandchild today and give them the tools they will use for a lifetime. Our youth accounts come with free parental-account supervision, so you can easily monitor your child's account.

Auto and recreational vehicle loans. As the weather warms up, summer traveling becomes more popular. If you are in the market for purchasing a recreational vehicle, see OE Federal first! Whether you're purchasing a boat, ATV, RV or motorcycle, we have the perfect loan to fit your needs.

Real estate. As your financial partner, we have a dedicated real-estate team that is not only your personal loan officer but also your mortgage advocate. Our in-house Real Estate Department is comprised of experienced, friendly and knowledgeable staff. If you're in the market for a new home or second home, or if you want to refinance your current high-rate mortgage, contact us today. We’ll find the loan option that fits your needs. Our real-estate experts are here to answer all your questions at (800) 877-4444, ext. 4110.

Call, visit or go to our website to make sure that you and your family have all the products you need in time for summer! If you are not currently a member, or you are and one of your immediate family members wants to join, call or visit our website or any local branch to learn more about how we can help you.

TEACH YOUR TEEN

Responsible Money Management.

We understand your teen wants their freedom and you want help managing their spending habits. Our Youth Accounts, for ages 13 to 17, help you teach your teen the importance of money and how to manage it. Plus, our Youth Accounts allow you 24/7 parental control of your teen’s account where you can view activity and easily transfer allowances or emergency funds from any OE Federal Account.

Our Youth Accounts Feature:

- A VISA Debit Card
- Cross Account Transfer
- Mobile Access
- Parental Account Monitoring
- Monthly E Statements
- Balance Status Alert

Call or visit us online. (800) 877-4444 • oefcu.org
Fringe Benefits
By Charlie Warren, director

Credit for military service
If you are unable to work the necessary hours in covered employment due to service in the United States Armed Forces, you will receive credited service, Pension credit and accrued benefits for the period you retain reemployment rights under the federal law.

Military service after your contribution date
After your contribution date, if you are absent from covered employment due to qualified military service, you will be credited with hours toward the accumulation of years of credited service, Pension credit, accrued benefits and the prevention of a break in service for the period of the military service, provided:

- You were working in covered employment in the jurisdiction of Local 3 during the 90-day period immediately preceding your military service.
- You had not incurred a one-year break in service at the time you entered qualified military service.
- You satisfy the USERRA’s advance notice to the employer (or Trust Fund Office) requirement prior to your leave to enter qualified military service.
- Your discharge from military service was under honorable conditions.
- You return to work in covered employment in the jurisdiction of Local 3 within the reemployment period required by federal law, as shown in the chart below:

<table>
<thead>
<tr>
<th>Length of Military Service</th>
<th>Reemployment Deadline</th>
</tr>
</thead>
<tbody>
<tr>
<td>Less than 31 days</td>
<td>Within one day after discharge (allowing travel time, plus eight hours)</td>
</tr>
<tr>
<td>31 through 180 days</td>
<td>Within 14 days after discharge</td>
</tr>
<tr>
<td>181 days or more</td>
<td>Within 90 days after discharge</td>
</tr>
</tbody>
</table>

No more than five years of qualified military service will be recognized toward the accumulation of years of credited service, Pension credit, accrued benefits and the prevention of a break in service or a separation from covered employment.

For more information, please refer to the Pension Summary Plan Description booklet or contact the Fringe Benefits Service Center at (800) 532-2105 or the Trust Fund Office at (800) 251-5014.

District visits
There are no district visits scheduled for the month of May. Visits will resume on June 5 and follow the regular schedule.

Get ready for the Retiree Picnic next month!
Mark your calendars for the upcoming Retiree Picnic on Saturday, June 1 at Lake Clementina Park in Rancho Miralete, Calif. (From Hwy. 16, turn onto Miralete Parkway and check in at the security gate.)

Come up Friday at noon and stay until noon on Sunday, if you wish! If you plan on coming in your self-contained motorhome or trailer, call the Fringe Benefits Office at (800) 532-2105 by May 15. Motorhomes and trailers cannot be accommodated at the picnic site.

We’ll see you there!

Retiree Association Meetings
The Retiree Association Meetings start this month. The Local 3 officers look forward to joining Retirees and their spouses for concise reports, good refreshments and plenty of fellowship. Check the schedule below or keep an eye out for the postcard inviting you to the meeting in your area.

- **MAUI**
  - Sunday, May 5 11 a.m.
  - VFW Hall
  - 1136 Ulumui Drive
  - Kihei, HI

- **OAHU**
  - Monday, May 6 2 p.m.
  - Operating Engineers’ Building
  - 1075 Opakapaka St.
  - Kapolei, HI

- **KONA**
  - Tuesday, May 7 6 p.m.
  - Kona Beach Resort
  - 4331 Kona Beach Drive
  - Lihue, HI

- **MODESTO**
  - Tuesday, May 7 10 a.m.
  - Tuolumne River Lodge
  - 2429 River Road

- **STOCKTON**
  - Tuesday, May 7 2 p.m.
  - Italian Athletic Club
  - 3541 Cherryland Ave.

- **REDDING**
  - Wednesday, May 8 11 a.m.
  - Courtyard Marriott (King Kam)
  - 75-5660 Palani Road

A ‘mission’ to create jobs

Story and photos by Mandy McMillen, managing editor

In San Francisco’s Mission Bay, there is an 11-block radius of development work that is booming like a bass drum. In fact, if you stand smack-dab in the middle of this area, you can turn 360 degrees and see work from every angle.

Members who are a part of this giant residential project with McGuire and Hester, Foundation, C.F. Archibald, Tennyson Electric and Shooter & Butts are very conscious of what it means: A better economy and more opportunity for all. An onslaught of residential work also means an improvement in the private market, which is another sign of better times.

“It’s like it was seven years ago; things are really booming,” said 11-year member Trevor Walshe. “I love it!”

Even the residents and tourists passing by can’t help but get excited about it all.

Walshe was once a tourist of San Francisco himself, but after visiting it in his 20s from Europe, he stayed. More than 20 years later, he is still a proud resident of the city and an even prouder member of Operating Engineers.

Surveyor Justin King with F3 Land Surveying is also caught up in the excitement of all the new development work in District 01.

“We’re working on the indicator piles for block 13 west,” he said, which will be a 13-story residential building with retail around its perimeter. “There are about 600 piles. It’s an early job.”

Early is good, since it means more work for longer. Oiler Don Capone, who is working on a residential development at Fourth and Channel streets, hopes to stay on for awhile.

“It’s my first day,” he said, while keeping track of a Rapid Impact Compaction (RIC) machine.

Member Glenn David Mahan Jr. with Tennyson Electric has been on the job for five months. He and his crew are working on the joint trenches in conjunction with the Muni that will eventually service the high-rise apartments going up all over.

These residential projects are in such close proximity of one another that it’s hard to see where one ends and another begins. The same is true for all of the different companies.

McGuire and Hester’s Rich Murphy, a 30-year member, was digging trenches between blocks two and 13 beside C.F. Archibald’s third-step Apprentice Monica Almendarez, who was working on Fourth and Channel streets. Not far from them, Greg Winters was compacting soil on blocks 11 and 13.

Right now, San Francisco has something for just about every operator!

“Work’s been good,” said Mark Dimas, a 32-year member with C.F. Archibald.

Blade Operator Mark Dimas works for C.F. Archibald.

McGuire and Hester Foreman David Floyd is very complimentary of his crew.

RIC Machine Operator Greg Winters improves the soil for roads on blocks 11 and 13.

Apprentice Monica Almendarez.
Sunol Aggregates, a subsidiary of Oliver de Silva, Inc. (ODS) located in Dublin, Calif., took over the lease of a 325-acre site owned by the city and county of San Francisco, part of the San Francisco Public Utilities Commission (SFPUC). The property is composed of an alluvial deposit, roughly 300 feet deep, and has been mined by many producers since the mid-1950s. This site will, in part, help replace two former sites that were operated by ODS in the East Bay – Dumbarton Quarry and La Vista Quarry. Sunol Aggregates will service the East Bay market out of this operation for the next 30 years.

The plant’s concept and design involved the entire facilities team as well as outside consultants and technical experts with years of experience in the production of high-quality construction aggregates. The new plant uses several washing and agitating stations, and material can be blended between manufactured and natural stations with little to no re-handling needed.

Operating Engineers were responsible for all phases of the project, which included demo-ing the old site and building the new one.

The first phase of the project started in November 2011 and involved erecting the primary processing section of the plant, including a jaw crusher and rotary scrubber. This was all done while the former producer was still working onsite.

The second phase of the project started in January 2012. The existing plant was dismantled, and several pieces of equipment were either listed for sale or recycled as scrap steel. After the existing plant was removed, a new underground-drainage system was installed, the plant site was graded for proper drainage, the high-voltage electrical system was continued across the site and concrete crews began the layout of the many equipment stations.

The plant’s electrical system is state-of-the-art, including four strategically placed motor-control centers that house individual motor starters, Variable Frequency Drives (VFDs) and soft starts for the more than 150 pieces of equipment. The VFDs allow the plant operator to control the speed of feed conveyors, crushers and water pumps onsite, which varies the amount of electricity required to operate the plant and gives more flexibility as to what products can be produced. The entire electrical system is tied together via a fiber-optic backbone that allows the plant operator to see different parameters of the equipment from the control room located 35 feet in the air, in the center of the plant.

Attention to safety was a priority from day one for the Sunol Aggregate management team. With an aggressive schedule and several crews working long hours, the project was completed with no time lost to accidents among the many subcontracted trades used onsite.

Now that the plant is up and running, a D10R is responsible for starting the material flow by pushing it to a re-locatable dozer-trap feeder, a technology used by a number of producers in the area. Material is then conveyed through a primary crushing circuit where it is sized for the 10-by-25-foot rotary scrubber, the primary washing piece of equipment. From there, material is sorted into three types – coarse aggregate for asphalt, fine aggregate for concrete production and sand, which is pumped to the sand-processing section of the plant. Ten radial conveyors rolling on concrete runways stack the finished product for load-out to customers.

And the best news: All employees at the plant are Operating Engineers!
Some spring reminders
By Bob Miller, ATPA senior account executive

District Visit Program

The District Visit Program continues to be very popular throughout Northern California. Often, the Associated Third Party Administrators (ATPA) and Fringe Benefits staff have back-to-back appointments. Members and spouses appreciate the opportunity to discuss Fringe Benefits issues and get their questions answered without having to deal with multiple phone calls or a trip to Alameda.

For example, a Retiree and his spouse needed some medical bills reviewed and had questions about Pensioned Health and Welfare. They called Yuba City District Secretary Michelle Taylor and scheduled a time to meet with an ATPA representative. Held at the Hall, it was a short drive for them to come into the office. Over coffee, they spent about an hour going over a stack of bills and cross-referencing them with the Explanation of Benefits (EOB) statements they had received. It turned out that all was in order after everything was examined and explained. The Retiree’s wife was also concerned about continuing medical coverage if her husband passed away and learned that the Plan provided surviving-spouse coverage that was basically the same as the Pensioned Health and Welfare Plan. Since they were on Medicare, she was relieved to find that the cost of the surviving-spouse coverage would be slightly less than the $250 per month they were currently paying. As they left the Hall, the Retiree said, “I can’t get around so well anymore, and I have trouble hearing on the phone, so this visit was a real convenience to me, almost a necessity.”

You too can get your questions answered! Please see our schedule below.

Medicare Part B

Remember that the Pensioned Health and Welfare Plan requires enrollment in Medicare Part A (the hospital portion) and Part B (the doctor portion) upon reaching age 65. Sometimes members neglect to sign up for Part B because there is a cost, and as a result, they have an unpleasant surprise when medical bills come. Without enrollment in Part B, the participant must pay the first 80 percent out-of-pocket that Medicare would have paid had they been properly enrolled. Please remember to enroll in BOTH Medicare parts A and B.

ATPA

Apprentice saves the day for Hayward children

By Bob Miller, ATPA senior account executive

Skid-steer Operator Jason Kenyon uses an auger bit to drill holes for playground equipment in Hayward.

When fourth-step Apprentice Jason Kenyon got a call from Dispatcher Phil Deeff about the Eden Area YMCA needing an operator to volunteer to help build a playground, he didn’t hesitate. The District 20 apprentice had been on the out-of-work list for six weeks and lived in nearby Fremont, so he was more than willing to help.

According to YMCA Branch Operations Director Jackie Flynn, “I called the Operating Engineers Local 3 on the advice from a friend who said there would be good people there, willing to help. I was not disappointed. Every single person with whom I spoke to was not only willing to help, but I actually had follow-up calls to ensure that I had indeed been helped.”

The scheduled playground-build was a big deal to the Hayward community, where the YMCA children designed the playground to be built with help from the YMCA, Shutterfly (a foundation that supports education and family wellness in communities), KaBOOM! (a non-profit dedicated to saving children’s play) and local volunteers.

“They needed someone there the next day,” said Kenyon, who showed up early.

“He jumped in to help the prep crew before the skid steer even arrived,” said Flynn. “When some targeted holes were perceived to be too close to lines for the use of heavy equipment, Jason got right down there with everyone else and started digging manually. He gave 200 percent to the job, had a fantastic, upbeat, ‘can-do’ attitude and was a credit to your membership.”

While Kenyon may have helped the project tremendously, he got back so much more from volunteering.

“You can never do enough good things,” he said. “It felt great to help, and all the kids were around.”

He also gained some confidence. As an apprentice, you move around from job to job, and “you’re the new guy all the time,” which can be hard, he said. “This [volunteering his time on the playground] was the best thing for my confidence. I realized equipment is the same thing everywhere, which really helped me out a lot.”

The saying “no good deed goes unnoticed” may have some truth to it. Two days after Kenyon volunteered, he was dispatched to a pipeline job for Steve P. Rados.

The new playground will provide more than 750 children in the Hayward Community a safe place to play (no playground existed before) and includes benches, raised plant beds, a bocce-ball court and shade and seating structures.
It's windy and dry, but the sights can be breathtaking for operators working on the Geneva Rock belt-line project at the company's Hansen Quarry. They maneuver through mountainous terrain at incredible heights.

Located at Point of the Mountain, Local 3 members with Geneva Rock Products, Inc. and its sister company W.W. Clyde & Co. are responsible for adding about 2,400 feet of 60-inch-wide conveyor belt to aid in the quarry's efficiency.

According to Hansen Manager Ed Clayson, the width of the conveyor belt is an unusual size, but Geneva Rock is an unusual company.

"[It's] one of the richest sand and gravel resources in the state of Utah," he said.

The belt line is being added because mining on the mountain has gotten so high. When the project is finished, mining will be broken up between the upper half of the mountain and the lower half.

To make this happen, members must cut through mountain and snake three sections of belt through different levels, including some at 19 percent grade. They are also creating a high bank for dust control.

The conveyor system will be much more efficient and less expensive than pushing dirt down the mountain with dozers, especially when you factor in the price of diesel fuel, noted W.W. Clyde & Co. Foreman Kevin Roseman. The project has been a good one for his crew.

"It's good work while the economy is slow," said the 13-year member. "We're making some folks some paychecks."

They're also saving the company money by ensuring that the cut matches the fill. This means that the amount of materials taken from the mountain will be used in its entirety to fill space in other places, which cuts down on overall costs.

A similar exchange is happening between the plant operators and the project operators. When work is slow for the members at the plant, they "fill in" to help with the project.

"It works for me," Roseman said with a laugh. "Geneva's equipment came with operators!"

According to one of these operators, being able to watch the project has been enjoyable.

"It is cool watching the belt be built," said 19-year member Brandon Burt. "I get to see the hill come down in one area and go up in another."

The job has been challenging because of the steep terrain, but these members are experts.

FROM BELOW: Geneva Rock’s William Steele operates a 988H loader at the bottom of the mountain.
of the Mountain

Broken from the mountain will be used in its entirety to fill space in other places, which cuts down on overall costs.

A similar exchange is happening between the plant operators and the project operators. When work is slow for members at the plant, they “fill in” to help with the project.

“It works for me,” Roseman said with a laugh. “Geneva’s equipment came with operators!”

According to one of these operators, being able to watch the project has been enjoyable.

“It is cool watching the belt be built,” said 19-year member Brandon Burt. “I get to see the hill come down and go up in another.”

The job has been challenging because of the steep terrain, but these members are experts.

“They call when they’re ready to push, so we get out of the way,” said Compactor Operator Uti Tauauvea, describing the fast pace of the dirt being moved.

Despite the job’s precarious positioning and pace, the 16-year member enjoys what he does.

“I like finish work, making sure it is done well and will pass inspection,” he said.

A total of 151,000 yards of material must be moved before the system is operational, hopefully by September.

“[We’re] loading about 320 trucks a day,” said Geneva Rock Loader Operator William Steele.

Improvement is a common practice for Geneva Rock, the top supplier of sand and gravel for the Wasatch Front since 1954. When operators are finished, the plant will run even more efficiently at every level.
Public-private partnership key in High-Speed Rail safety

Your Technical Engineers reps. have been busy assisting International Union of Operating Engineers (IUOE) Western Region Political Director Tim Cremins and Local 3 Director of Government Affairs Mark Kyle. We have been meeting with lawmakers from both sides of the aisle in Sacramento over concerns raised by the Professional Engineers in California Government about who will insure public safety on the $65 billion High-Speed Rail project scheduled to break ground in July.

We met with key members of the state Assembly and Senate transportation committees and with High-Speed Rail Authority Board Chairman Dan Richards to reassure them that public safety is served by employing Local 3’s signatory partners. This public-private partnership dates back to the Great San Francisco Earthquake of 1906.

We reminded lawmakers that Local 3 is the source for apprentice inspectors and surveyors in Northern California, with 202 registered apprentices and 210 applicants and journey-level-upgrade personnel in the technical-engineering programs we co-sponsor with the California and Nevada Civil Engineers and Land Surveyors Association (CELSA), the Council of Engineer and Laboratory Employers (CELE) and the Northern California Testing and Inspection Association (NCTIA). It is through the positive stewardship of these partnerships that the highest-profile projects are brought in every day throughout Northern California on time and on budget.

Stewardship

At Smith-Emery Company of San Francisco, 16-year member Joel Nadler has taken over the job-steward duties formerly provided by Michael Johnson, who retired earlier this year after nearly 30 years of service. Nadler looks forward to serving the membership any way he can.

If you know any inspectors who would make good job stewards, please have them e-mail Senior Business Rep. Michael Strunk at mstrunk@oe3.org.

Hours improve

The season is starting out strong for the Local 3 Technical Engineers Department. We continue to see an upturn in the work picture with new dispatches and several recalls for surveyors and inspectors, meaning this year looks to be an improvement over last year. One signatory survey firm has hired 17 crews since last November and is still looking to add more.

Other firms are also adding new crews, as they work on topographical design surveys throughout Northern California. If this trend continues, firms may face a shortage of qualified people, so if you are a surveyor who is not working or would like more hours, please contact Business Rep. John Sanders at jsanders@oe3.org for a list of firms that are hiring.

Surveying firms need you!

By Michael Strunk, senior business representative, and John Sanders, business representative

Apprentice Damon Frazier is one of Local 3’s newest members to join the surveying industry. The second-generation surveyor is currently working on a project in Rancho Cordova for Cooper Thorne and Associates.

From left: Chainman Miguel Robles and Party Chief Joe Solomon get more work hours this year at the new 49ers stadium.
Bay Bridge set to open Labor Day weekend

District 20 has many jobs going out to bid for 2013. Work in the district includes $275 million worth of school demolition and reconstruction in the West Contra Costa School District. This will create many jobs for our members, and the work is under a Project Labor Agreement (PLA).

Work on the Caldecott Tunnel will be winding down by the time you read this. Signatory contractors Tutor-Saliba and Gordon N. Ball will perform the installation of the new roadway. The project, scheduled for completion in August, will provide a much-needed improvement to relieve traffic through the I-80 corridor.

Bay Cities and C.C. Myers have a Joint Venture (JV) in the San Ramon south I-680 corridor worth $25 million that includes High Occupancy Vehicle (HOV) lanes in both directions.

The new western span of the Bay Bridge is set to open over Labor Day weekend. Congratulations to all Local 3 members who worked on this project. The grand-opening ceremonies will be watched by many, considering this is the largest self-anchored suspension bridge in the world. We are very proud of our members, and they should be proud of themselves. They are a part of history.

Signatories work on Amazon project

April showers bring May flowers. That means spring is here, and with spring comes more work. Our work picture looks bright. Bay Cities kicked off the $15.6 million Hwy. 219 widening from about half a mile east of Dale Road to state Route 108, and work is scheduled to continue through November 2014. Sierra Mountain Construction started the Harding Drain bypass in Turlock, which should be finished this August.

O.C. Jones has the $27 million Hwy. 219/I-99 interchange that will start soon, if it hasn’t already. Teichert Construction is the apparent low bidder for the Fullkerth Road rehabilitation in Turlock, while Mozingo Construction and Peninsula Crane and Rigging work on the West Stanislaus Irrigation District’s 96-inch irrigation main in Westley. Mozingo is digging the trench, and Peninsula is setting pipe with a Liebherr lattice crawler. The pipe weighs 52,000 pounds per joint.

Flatiron Construction is still working on the Carpenter Road Bridge in Modesto with completion this fall. Knife River Construction has gone back to work on the Sylvan and Litt roads project, after the rains in November and December shut the company down. Knife River also has about a mile of 12-inch water-main replacement on Paradise and Carpenter roads.

Bigge Crane is finishing the tilt-up walls and iron for the Amazon project in Patterson. Interstate Concrete Pumping has been pouring close to 1,000 yards of concrete a day on the project, while Teichert Construction continues to work on some underground and paving onsite.

As we watch bids continue to come in, this year looks promising. If you are on the A or B out-of-work list, remember that your registration is good for 84 days. If you are on the C list, you must re-register on the first working day of every month.

Please also remember that our District Picnic is on May 5. Don’t forget to come out and enjoy some good food and good friends. As this year progresses, let’s all be proud to be members of Operating Engineers Local 3!
Improving our highways

We had pipeline-steward training at the District 60 Hall, and we want to thank the members who attended.

There are some decent jobs that have been awarded and some still going out to bid. Stop by the Hall and check out the job board that Dispatcher Chuck Adamson keeps updated. The board gives a good view of what’s going on in our district.

George Reed has work in Sutter and Colusa counties. Knife River Construction is working on a road-widening project in Yuba County and on a grinding and paving project on Ridge Road in Sierra County. MCM/DeSilva Gates is working on the Hwy. 70 and East Gridley Road project and the North Palermo Road pavement-rehab project. Mountain Cascade, Inc. is working on the fish ladder and No. 2 weir replacement for the Sutter Bypass at the end of McClatchy Road. Teichert Construction is working on the $25.5 million Hwy. 20/Hwy. 70 Marysville rehab project and has the Hwy. 99 and Riego Road interchange and the Hwy. 99/Hwy. 113 interchange.

Teichert Construction Company is still working on the state Route 32 undercrossing in Butte County. Golden State Bridge is working hard for the second year on the Ord Ferry Road Bridge retrofit.

We would also like to recognize our signatory material producers in District 60: DeSilva Gates’ hot plant; Knife River’s Hallwood, Chico and Orland plants; Teichert (Hallwood); Kino Aggregates; Silica Resources; Patterson Sand and Gravel (Cemex); and BCJ Unlimited Specialty Sand.

When you are working, please keep your eyes and ears open and help protect our work. If you see something out of the ordinary, call the Hall or your business agent. Remember, your call could put one of your brothers or sisters to work. All calls are confidential; you don’t even have to leave your name.

Also remember to stay current on the out-of-work list and to re-register before the 84th day. As always, feel free to call the Hall with any questions you have or stop by in person.

Members work for Ghilotti in Sonoma County.

Willits Bypass rally gains public support

As you read this, the Willits Bypass should be going once again. After 50 years of planning and years of environmental review, DeSilva Gates/Flatiron should be breaking ground and moving dirt. Some local extreme environmentalists decided to protest the project, with one person camping in a tree. Rohnert Park District 10 responded by putting together a rally/barbecue in downtown Willits. About 50 union members held handmade signs in support of the bypass, with overwhelming support from the public. Several local politicians also joined in. Anyone who has ever traveled California’s North Coast knows what a bottleneck this section of Hwy. 101 is, since the highway runs through the middle of town.

As far as other jobs go, our work picture looks good, with several large projects ready to start. Teichert Construction is widening Hwy. 53 in Lake County. Ghilotti Brothers is ready to go at the Petaluma Bridge on Hwy. 101 in southern Sonoma County. Ghilotti Construction is ready to widen the Petaluma Boulevard North/Hwy. 101 interchange and the Airport Boulevard/Hwy. 101 interchange. The company also has the Shortt Road and Sonoma Avenue sewer- and water-replacement project in Santa Rosa. Terracon Construction is repairing the Meadow Lane storage pond for the city of Santa Rosa. Gordon N. Ball has the Porter Creek Bridge replacement at $4.4 million for the county of Sonoma. Mountain Cascade has work at the Eighth Street East sewer plant in Sonoma for $3.1 million. Siri Grading & Paving picked up the $450,000 Safe Routes to Schools project.

As part of the Graton Rancheria Casino project in Rohnert Park (Sonoma County), Wilfred Avenue is scheduled to be widened from Old Redwood Highway to Stony Point Road. The engineer’s estimate is $14 million, and this job should have been awarded at the end of March. The Sonoma County airport is scheduled for major upgrades, and the county is ready to let $5.5 million in road work.

Members gather for a rally to support the Willits Bypass.
Bridge work keeps members busy

We are proud to announce our new District 70 Political Action Committee (PAC) members. Serving the district for 2013 are Mike Tauscher, Martin Mattila and Ben Scott, along with Executive Board member Stan Green. We thank you for your willingness to serve.

It was nice to see a good number of members in attendance at the March Semi-Annual in Vallejo. This is a great way to show support for your union, get caught up with some old and new friends, share your concerns and get the latest information about your local.

Work has been lean in District 70, but we do have hands working. WWW Construction Inc. is working on a waterline project east of Susanville in Herlong. That will keep several of our members employed through this coming fall. RNR Construction was awarded a $3 million bridge replacement on Swede Creek Road at Little Cow Creek in Palo Cedro. Shasta County is advertising another bridge replacement in Redding over Churn Creek at Old Oasis Road. Hopefully this project will be awarded and start this season. J.F. Shea has several paving projects from last season that will be completed this year and is working on a new bridge job on I-5 in Yreka valued at $8.5 million. Tullis, Inc. is paving I-5 south of Anderson and has an overlay project in Palo Cedro.

Lots of work; stay close to your phone!

The current work picture looks good. MCM has a big job in Fresno on Hwy. 99. The company is going to replace the bridge over the San Joaquin River and widen the freeway from Herndon Avenue to Avenue 7. Granite Construction is performing the dirt work.

Just up the freeway on Avenue 12, the interchange is getting a major overhaul. Security Paving was awarded the job and should keep many operators busy for a couple of years.

Two major projects are underway on Hwy. 99 south of Merced. Teichert and FCI are joint-venturing on a $86 million job that will continue through 2015. South of that project, Security Paving is busy with a $44 million job, keeping operators busy until 2016. RGW is still working all over Merced. The company has three jobs on Hwy. 99 and one in the city. If you head south on Hwy. 99 from Fresno, you will see Diablo still working near Kingsburg. Papich recently started a $32 million job near Goshen on Hwy. 99, and Granite is still working on a job on Hwy. 99 in Madera. Drive just about anywhere on Hwy. 99 and you’ll run into some kind of construction!

R & L Brosamer is halfway through a job on Hwy. 180. There is a big push to get this job done, which allowed operators to turn in some overtime. Emmets is staying busy with jobs in Visalia, Fresno and Clovis. Granite has a few projects in the valley and picked up a nice job in Fresno constructing a water main. Floyd Johnston and West Valley have some underground work. Teichert is at the Fresno Airport extending the existing runways. Viking Construction landed a nice job in Porterville at the Plano Street Bridge. Sharma is working at the Madera Courthouse. We have also had quite a bit of pipeline work in our district and are expecting more, so stay tuned for details.

With that said, we want to remind our members about the rules of the hiring hall:

*If you are getting dispatched with a letter, it’s your responsibility to come by the Hall and get dispatched before reporting to work. You must get cleared out of the hiring hall before going to work.

*When dispatch is filling an off-list order, we call the phone number(s) we have on file for the next member. If he or she doesn’t answer the phone, we leave a message when possible and immediately call the next member on the list. We continue down the list until we reach someone who accepts the dispatch. It’s important that you have your phone available whenever possible to receive a call for a job. If at any time you have any questions, please call the Hall.

*If you’re not eligible for a 10-year letter, you may be qualified for a five-year letter. A member who has an A-hiring status, has been dispatched and worked for an employer within the last five years may be eligible for a five-year letter. Call the Hall, and we can tell you if you’re eligible and what employers you have worked for in the last five years.

Please remember to attend our District Picnic on June 22 at Anderson River Park.
Work outlook still positive

As we head into another summer, the work picture continues to look good, as several large jobs start to pick up. The Joint Venture (JV) between Skanska, Shimnick and Herzog (SSH) is underway on the BART extension in San Jose/Milpitas, while the San Francisco 49ers stadium in Santa Clara and the Los Esteros Power Plant in San Jose continue as well. The groundbreaking for San Jose’s professional-soccer stadium was delayed but should have started by the time you read this.

Granite Construction, MCM Construction and St. Francis Electric continue work on the Prunedale Improvement Project (PIP) on Hwy. 101. Granite Construction also started the Red Barn fly-over project just down the highway, continues replacing a waterline at the Camp Roberts Military Base in Bradley and appears to have been awarded the removal of the San Clemente Bridge in Carmel Valley that is scheduled to start later this year.

Golden State Bridge is working on the road replacement just south of the historic Rocky Point Bridge in Big Sur and is putting the finishing touches on a job further down the coast in Lucia. RGW continues work on the Hwy. 1 widening project in Santa Cruz and is finishing the Butterfield Road extension in Morgan Hill. O.C. Jones and Vanguard continue work on the Hwy. 101 project in Mountain View, while Jos. J. Albanese, Preston Pipelines and Doyle’s Work Company work on VMware in Palo Alto. DeSilva Gates and MCM Construction started work on a job at Hwy. 280 and Hwy. 17 in San Jose. Graniterock/Pavex is working on the Hwy. 101 road-widening at Capitol Expressway in San Jose and performing site work for the new sheriff’s office in Santa Cruz.

We’d like to congratulate Ed Wodzienski and Michael Busch for being nominated as Volunteers of the Year in District 90. We say all the time, “This is your union; please get involved.” These two people did just that. Wodzienski is a 26-year member who recently retired and still believes in giving back to the union. Busch is a 10-month apprentice who is learning the union way. We thank you both.

District 90’s picnic is back. The new location is at Delaveaga Park in Santa Cruz, located off Branciforte Drive. The event will be held from 11 a.m. to 3 p.m. on June 29, and the menu includes tri-tip, chicken, hot dogs, beans, coleslaw, ice cream, beer and soda. Food will be served from noon to 1:30 p.m. The day’s activities feature a raffle, face-painting and a bounce house, games and prizes for the kids. You can purchase your tickets now for just $10. (Retirees and kids under 10 are free.) Stop by the Hall or see one of the business agents for tickets and a map. Hope to see you all there.

Work safe, work smart and make it a great year.

HAWAII

1075 Opakapaka St., Kapolei, HI 96707 • For all branches, call (808) 845-7871

OSHA 10 will soon be required to work on military bases

As we approach mid-year, we have gotten a steady flow of dispatches from our contractors. In January and February, we dispatched more operators than we did during the same months in 2012. This is a good sign! More projects are starting than finishing. One of the jobs currently going on is the Sea Country project with

Royal Construction. It should be a good year for Operating Engineers.

Occupational Safety and Health Administration (OSHA) 29 CFR 1920.178 requires forklift operators to be certified, and contractors are asking for it. It is important when signing up for a forklift classification that you have current certification. It’s good for three years. For those on the out-of-work list, check the expiration date of your certification. Those interested in getting certified should contact the Kahuku Training Facility at (808) 232-2001. While calling, you should also ask about Hazwoper, first aid/CPR, Disaster Service Worker (DSW) and OSHA 10 or 30 certifications. Soon, all those working on military bases will be required to have an OSHA 10 certification.

Here are a couple of other reminders:

Our second-quarter meetings are as follows:

Maui: Sunday, May 5
Town Hall/Empowering Operating Engineers Event/Retiree Meeting: 10 a.m. to 2 p.m.
Veterans Hall, Kihei

Oahu: Monday, May 6
Retiree Meeting: 2 p.m.; District Meeting: 7 p.m.
Operating Engineers’ Building, Kapolei

Kauai: Tuesday, May 7
Town Hall/Retiree Meeting: 6 p.m.
Kauai Beach Hotel

Kona: Wednesday, May 8
Retiree Meeting: 11 a.m.; Town Hall Meeting: 7 p.m.
King Kamehameha Hotel

Hilo: Thursday, May 9
Retiree Meeting: 11 a.m.; Town Hall Meeting: 7 p.m.
ILWU Hall

The Hawaii Master Construction allocation meetings will be on Monday, June 3 at 7 p.m. at the following locations:

Oahu: Operating Engineers’ Building, Kapolei
Kauai: King Kamehameha Hotel
Hilo: ILWU Hall

Work safe, work smart and make it a great year.
New landscaping company to sign Master Agreement

The weather is getting better, and so is the work picture. The winter was somewhat mild in Sacramento, and there’s more work now than in 2012. Hopefully this trend continues.

With the warmer weather, we all need to be conscious of the heat and take precautions so we don’t get a heat-related illness. Hydrate as much as you can, and keep a bottle of water close by at all times. (Remember: It only helps you if you drink it!) Try to eliminate the drinks that dehydrate you, like coffee and soda. Sports drinks are good, but nothing can beat water. Doctors say you should drink six to eight 10-ounce glasses of water every day.

We have been fortunate to acquire a new signatory contractor in the landscaping industry. Decker Landscaping is currently in the process of signing the Master Agreement and is excited about the doors it will open for the company.

Lund Construction picked up a rough-grade housing project on Fiddyment Road and Blue Oaks in Roseville. It is a 277-lot housing project valued at $1.5 million that will keep the company busy until mid-June.

Teichert Construction picked up a paving project in Grass Valley worth $7.73 million that will start in Penn Valley and end at the Downieville turnoff in Nevada City. The company is also working on Sunrise Boulevard.

McGuire and Hester will build a new interchange on Dorsey Drive and Hwy. 49 in Nevada City valued at $15.5 million that will keep members busy through the construction season.

Mountain Cascade is finishing the fifth phase of the Gold Run pipeline-replacement project.

New hours at Hall

Work has been slow this winter in District 40.

Fluor continues to keep a few operators busy at the Humboldt Bay Pacific Gas and Electric (PG&E) nuclear-decommissioning project. This job has provided steady work for experienced hands for several years now, and there is still much more to be done.

Dutra has kept a skeleton crew busy at the Crescent City Harbor reconstruction project. Crews are waiting for the Department of Fish and Game to give the “OK” to proceed. The low bid for this project has been estimated at $33.8 million.

Mercer-Fraser set up a portable crushing plant in Dinsmore to make base for aggregate for a paving project on Hwy. 36. The company will also pave the Hwy. 101 Safety Corridor after winning the project for $11.8 million. At the Fortuna quarry, a few hands continue to work at the portable redi-mix plant. Mercer-Fraser was also the low bidder on the Hwy. 299 paving project east of Blue Lake at $8.7 million.

Wahlund Construction has kept a few hands busy at the Stewart Street Reservoir in Fortuna and at the Rio Dell Water Treatment Plant.

Powell Concrete Pumping has had steady work this spring at the PG&E Power Plant and Crescent City Harbor. The company has also had some private work that is keeping members busy.

Peterson Tractor has kept all its operators busy through the winter and spring.

West Coast Contractors was the low bidder for the Smith River retrofit at $8.6 million. Hopefully, the spring weather will cooperate so crews can get the job done.

Bugler Construction, a signatory company out of Alameda, was the low bidder on the Klamath River Bridge project at $3.8 million.

Six paving projects between $5 million and $11 million are coming to bid within the next couple of months, including a $10.5 million project on the Crescent City Harbor outer-boat basin, so hopefully our signatory companies can keep their pencils sharp.

As of March 4, 2013, the Hall has new hours. The office will be open from 9 a.m. to 5 p.m. Monday through Friday. Late night will be the fourth Wednesday of the month, and the office will be open until 8 p.m.

We’d like to remind you all to please Slow for the Cone Zone and our brothers and sisters at Caltrans.

If you see anything out of the ordinary, call Business Rep. Bob Center at (707) 601-8172.

Finally, we would like to offer our condolences to the family of Mike Conway, who passed away on Feb. 23, 2013. Conway was a 25-year member of Operating Engineers, a member of the District Business Committee and a willing participant in our union during his time with us. No matter what his union asked him to do, he would do it – with a smile! He will be sorely missed by the District 40 staff and members. Rest in peace.
Benicia crew does a bit of everything

The crew at Amports takes care of a very important part of the Benicia port and waterfront. Members maintain all of the dock facilities that on- and off-load automobiles for import- and export-rolling. They also off-load the coke product that comes from the Valero refinery by way of truck and rail car. It is then transported and stored in the dock silos to later load onto ships by means of a conveyor-loading system. This is quite an operation that, at times, works around the clock. This multi-faceted crew performs duties from crane operation to handiwork and keeps things well-maintained, so everything runs smoothly. Keep up the good work.

In April, Teichert Construction started repaving I-80 from I-505 to Davis. The project includes 8-inch overlay and bridge approaches and should employ at least 30 operators. There are also many smaller projects slated to begin this summer, so be sure to call the Hall and get on the out-of-work list if you are looking for work.

The District 04 Picnic will be held at Pena Adobe Park on Sunday, June 30. Tickets are on sale now at the Hall. Buy your tickets early to save some money. Adults are $10 in advance and $15 on the day of the event. Retirees are $5 per couple, and children 5-12 are $3.

Billions of dollars worth of work at SFO

In San Mateo County, the work picture looks good. G. Bortolotto & Company, Inc. is keeping operators busy on several projects, including a grading and paving job using its new Wirtgen 4-foot milling machine. Operators include Walter Roland, Virginio Bortolotto, Michael Valencia, Juan Velazquez, Jose Perez and Gary Bortolotto.

The new San Mateo County Replacement Jail Capital Improvement Project is under a Project Labor Agreement (PLA), which means all work will be union! Ferma finished the demolition in March. Ghilotti Construction will perform all the site-grading, with Foundation Piling Contractors driving more than 530 piles 106 feet deep. Also on the job, Enggeo is testing the soil and monitoring the pile-driving.

In Daly City, J. Flores has a sewer-replacement project with operators Miguel Flores Jr. and Heriberto Lopez. In Woodside, Jos. J. Albanese is pumping concrete with California Caissons. Operators include Brian Zolezzi, Joe Martinez and Brooks “Bud” Moore. In San Carlos, Cemex Batchman Rich Rathjen and Loader Operator Paul Gutierrez keep the concrete coming. For such a small plant, these guys do great work. At the San Francisco International Airport (SFO), there will be 84.5 billion worth of work, which means 18,000 to 20,000 jobs over the next eight years.

In San Francisco, Brad Buffalow is on a Liebherr 316 tower crane on the private-work project on Third Street near Mission Bay for new signatory Anvil Builders, which also has Peter Ostermeyer on Van Ness running a manlift. On the same job, Rick Murchie is operating a tower crane for Clipper International. Cahill has a tower crane up at 1645 Pacific with Vince Goehner at the helm.

The build-out continues at Mission Bay just south of AT&T Park on Fourth Street, where Nibbi Brothers and Roberts/Obayashi are subbing work to McGuire and Hester, Conco, Tennison Electric, Ryan Engineering, Jos. J. Albanese, DW Young, Foundation Constructors and Kel Crane with Kenny Hubbard and Daryl Hardy hoisting rebar. Allied Concrete Pumping is working at AT&T Park. A. Ruiz Construction has worked on Folsom Street with Edgardo Monterrosa on an excavator. It takes constant vigilance to work on the city streets, with pedestrians and vehicle traffic to contend with. Remember to be safe and stay hydrated.

The Burlingame staff looks forward to seeing you and your families at the District 01 Picnic at Coyote Point Park in San Mateo on Sunday, June 30. The menu includes tri-tip, chicken, hot dogs and beer. See you there!
Several companies working on I-80

The Reno staff would like to thank all of our members for the turnout at the last District Meeting and their help in electing our new Political Action Committee (PAC) members, Mitch Gallagher, Robert Mack and Kevin Porter. Work is looking up as projects begin again. There are several jobs on I-80 being performed by Granite Construction, Q&D Construction, Road and Highway Builders and Sierra Nevada Construction (SNC).

Other projects include the Reno Southeast Connector with Kiewit Construction and Snyder Lane in Carson City at Hwy. 395.

As always, the mining industry is booming and needs experienced operators with Mine Safety and Health Administration (MSHA) certification.

Please keep your contact information current as well as any certifications.

From Elko

For the first time in a long time we watched gold fall below $1,600 an ounce as a result of some market fluctuation. It is still speculated to grow. Newmont has implemented a number of new safety programs to keep our workers safe. We want to keep the company’s great track record alive. Contract books are being printed, and we will distribute them shortly. They will also be available at the OE3 office in Elko, and new employees will be issued one as well as a pamphlet explaining the importance of unions. This idea was negotiated between Newmont and the union. Let’s keep working safe and get outside to enjoy the spring air!

Salt Lake City office is moving

District 12 has been blessed with plenty of work over the last few years. We have seen many great projects, like light rail and commuter rail, pipelines, I-15 in Utah County and the Mountain View Corridor, that have kept us busy and working through this tough recession. When you have so much work, you are able to pick and choose your job and sometimes even what you want to do on that job. However, when things slow down, you tend to wish you were a little more well-rounded. This year in Utah, things will be steady but not as busy as the last few years. We need to take advantage of the training site to upgrade our skills and help us prepare for the needs of the future. There is nothing worse than getting called for a job and your operating skills meet the requirements but you are missing a required certification and cannot accept the dispatch because of it. If you do not have your Occupational Safety and Health Administration (OSHA) 10, Mine Safety and Health Administration (MSHA), Operator Qualification Course (OQC), hazmat, gradesetting, GPS courses, etc., working. We are thankful to Job Steward Preston Elsbury and our members at the tailings for their hard work.

Geneva Rock is also keeping members working.

With four oil-refinery shutdowns and a lot of crane work in the state, we are constantly looking for good crane operators. If you or anyone you know has National Commission for the Certification of Crane Operators (NCCCO) certification and is looking for work, please call the Hall.

Next month, the Salt Lake City Hall will be moving to 8805 S. Sandy Parkway in Sandy, Utah. The new office will be big enough to facilitate our meetings again, as well as the Credit Union, apprenticeship, dispatch and agent offices. See you there.
TOWN HALL MEETINGS

May 2013

1st District 11: Elko
Mine Meeting: 6 p.m.
Operating Engineers’ Building

AFL-CIO provides $5,000 scholarships

The AFL-CIO and Union Plus are offering a new scholarship to commemorate the 50th anniversary of the March on Washington, the famous gathering for Rev. Martin Luther King Jr.’s dream of equality for all. The scholarship will provide $5,000 each to at least 50 talented high school seniors from union families to help pay for the costs of higher education.

An application, including an essay, is required. For more information and to apply online, visit www.aflcio.org/scholarship.

The application deadline is July 1, 2013.

Honorary Membership for Retirees

Retirees with 35 or more years of membership in Local 3 are eligible for Honorary Membership. Eligible Retirees will receive their Gold Membership Card and a reduction in dues. To find out if you are eligible or to apply for Honorary Membership, please contact your district office or the Recording- Corresponding Secretary (RCS) office at (510) 748-7400. This month’s Honorary Members can be found below.

Honorary Membership

The following Retirees have 35 or more years of membership in Local 3 as of March 2013 and have been determined eligible for Honorary Membership effective April 1, 2013.

James Bradley
District 20: Oakland

Jim Brandon
District 90: Morgan Hill

Dennis Gallagher
District 11: Nevada

Manuel Garcia
District 50: Fresno

Brian K. Hamilton
District 30: Stockton

Joseph Koehler
District 04: Fairfield

Bill Lindner
District 80: Sacramento

Thomas L. Mathers
District 10: Rohnert Park

Larry Memmott
District 12: Utah

Richard M. Mullen
District 70: Redding

Garvin O’Neal
District 11: Nevada

Ron Pruitt
District 80: Sacramento

Andy Riddell
District 01: Burlingame

Tom Sperry
District 99: Out Of Area

Ronald F. Turner
District 99: Out Of Area

Important notice about Medicare

Members and spouses covered under the Pensioned Operating Engineers Health and Welfare Trust Fund and eligible for Medicare benefits who fail to enroll in both parts A and B of the Medicare program will have to pay more for their health costs. Therefore, it is strongly advised that these members enroll in BOTH PARTS.

Important registration reminder

Please remember to renew your registration on the out-of-work list before it expires! Registration for individuals with A-hire or B-hire status is good for only 84 days. After the 84th day, your registration expires, and you will lose your place on the out-of-work list, if you don’t renew it. We will do everything we can to notify you in advance, but it is your responsibility to contact the district office to renew your registration prior to the 84th day.
Details for May District Picnics

District 17: Hawaii (Maui) Picnic Details
Sunday, May 5, 11 a.m. to 2 p.m.
VFV Hall, 1136 Ulumii Drive, Kihei, Hawaii
Menu: TBD
Cost: Free

District 30: Stockton Picnic Details
Sunday, May 5, 11 a.m. to 4 p.m.
Micke Grove Park – Delta Shelter, 11793 N. Micke Grove Road, Lodi, Calif. (off Hwy. 99 and Eight Mile Road)
Menu: Tri-tip, asparagus, beans, salad, French bread, hot dogs, ice cream, soft drinks, water, beer
Cost: Adults: $10 in advance, $12 at the door; Retirees: $5; Kids 10 and under: Free
(If there is a 85 parking fee per car.)
Other information: Lunch will be served from noon to 2 p.m. There will be raffle prizes, a bounce house for the kids and a horse shoe contest.

Details for June District Picnics

District 50: Fresno Picnic Details
Sunday, June 9, 10 a.m. to 4 p.m.
Fresno County Sportsmen’s Club, 10645 Lanes Road, Fresno, Calif.
Menu: Tri-tip, chicken, hot dogs, beans, salad, rolls, drinks, ice cream
Cost: Adults: $10; Retirees: $5; Kids 10 and under: Free

District 60: Yuba City Picnic Details
Sunday, June 9, 11 a.m. to 3 p.m.
Butte County Fairgrounds, 199 E. Hazel St., Gridley, Calif.
Menu: Tri-tip, chicken, beans, salad, ice cream, beer, drinks
Cost: Adults: $10 in advance, $12 at the door; Retirees: $5; Kids 10 and under: Free

District 80: Sacramento Picnic Details
Sunday, June 9, 11:30 a.m. to 4 p.m.
Fresno County Sportsmen’s Club, 10645 Lanes Road, Fresno, Calif.
Menu: Tri-tip, asparagus, beans, salad, French bread, hot dogs, ice cream
Cost: Adults: $10 in advance, $12 at the door; Retirees and kids under 12: Free
Other information: Lunch will be served from noon to 2 p.m. Parking is free for the first 60 cars; then there is a $5 fee per car.

District 12: Utah Picnic Details
Saturday, June 15, 9 a.m.
Draper City Park (North Pavilion), 12450 S. 1300 E., Draper, Utah
Menu: Eggs, bacon, sausage, hash brown, doughnuts, fruit, juice, coffee
Cost: Families: $10; Adults: $5; Retirees: Free
Other information: Raffle tickets will be sold for an additional cost.

District 70: Redding Picnic Details
Saturday, June 22, 11 a.m. to 2 p.m.
Anderson River Park (Barbecue Area No. 1), 2800 Rupert Road, Anderson, Calif.
Menu: Pit-roasted beef cross-rib roast, green salad, barbecue beans, bread, fruit, ice cream, beverages

District 10: Rohnert Park Picnic Details
Sunday, June 30, 8:30 a.m. to noon
Santa Rosa Veterans Memorial Building, 1351 Maple Ave., Santa Rosa, Calif.
Menu: Pancakes, eggs, bacon, sausage, orange juice, coffee
Cost: Adults: $8 for members, $8 for non-members; Retirees and kids: Free
Other information: Hot Cakes and Hot Rides – District 10’s Annual Pancake Breakfast Car and Motorcycle Show.
Operating Engineers Local 3 Scholarship Foundation

A charity is only as strong as its contributors want it to be, and the Operating Engineers Local 3 Scholarship Foundation is no exception. Today, the foundation is strong both financially and in the support it receives from Local 3. It has grown substantially in the last several years, with much of its success due to an increase in donations from members, friends of labor and the employer community. Most contributions come in the form of traditional cash donations, but some have chosen more creative methods. Because of tax considerations, some donors are able to give a gift that is greater than they thought possible. These gifts help build the strength and future of the Scholarship Foundation and allow the donor to experience giving the gift of a lifetime. The Operating Engineers Local 3 Scholarship Foundation offers a variety of ways to contribute:

- **Cash gifts in any amount to the general Scholarship Fund.**
- **Merit sponsors and memorial and honor gifts.** You can contribute to the Scholarship Foundation in the memory or honor of a loved one, friend or colleague or to commemorate a special occasion. The Foundation will acknowledge your gift to the person(s) you designate and provide written acknowledgement of your gift and the amount. A $1,000 minimum is necessary to establish a named gift, and there are four donation levels:
  - **Merit**
    - $1,000
    - Third-place academic
    - $5,000
    - Second-place academic
    - $7,500
    - First-place academic
    - $10,000
- **Bequests.** Gifts made through your will will allow you to retain control of your assets during your lifetime and distribute them as you wish upon your death. Many people choose to include a gift to the Operating Engineers Local 3 Scholarship Foundation. Leaving a fixed dollar amount or specific property are the most common types of bequests. A charitable bequest may reduce your estate tax. Consulting an attorney is advised any time you make or change a will.
- **Securities.** There may be an advantage to giving marketable securities (stocks, bonds or mutual funds) instead of cash. In some cases, you may receive a charitable deduction on your taxes and avoid taxes on capital gains. Consult your financial adviser for details.

If you would like more information on donating to the Scholarship Foundation or have questions, please contact Rec. Corres. Secretary Jim Sullivan at (510) 748-7400.

Operating Engineers Local Union Local No. 3  
1620 South Loop Rd., Alameda, CA 94502

Please note: Anyone who contributes $20 or more will receive a scholarship pin.
Staff Spotlight: Justin Diston

Fifteen-year Local 3 member Justin Diston has faced some battles as the district rep. in Utah, where wages and workers’ protections are significantly less because of the right-to-work laws that govern the state.

“It is always a top priority to secure more work opportunities for our members through politics and organizing, which is a challenge at best,” he said. “Being a right-to-work state with no prevailing rate, we work closely with our elected officials to secure more infrastructure funding. We also work closely with our members and contractors through negotiations, job procurement and trying to retain a state prevailing rate.”

Yet, even with these battles, Diston has had much success throughout his Local 3 career. He joined the staff in February 2002 as an organizer in Fairfield, Calif., then became a district rep. in Sacramento in 2006. He transferred to the district rep. position in Utah in April 2010 and has made quite an impression on the membership there, including members Terry Randall and Paul Jiles.

Randall, a 25-year member and shop steward at Wheeler Machinery, met Diston before a big contract came up.

“I was impressed with him right off the bat,” said Randall. “He thought ahead of things we would never have thought of. He knew when to talk and when not to.”

Randall hopes Diston remains the district rep. in Utah at least until he retires.

“He goes the extra mile.”

Jiles agrees. A pipeline job steward, Jiles joined the union in 2007 with some hesitation after working in Colorado. His experience with other unions hadn’t been positive, as agents didn’t always get back to him or have the answers he was seeking.

“I worked all over the country, 28 states,” he said. “I got frustrated with the unions, but when I met Justin and had a question, he answered it and impressed me. He got back to me each and every time. … Any of the business agents in Utah do.”

Jiles said that in all of his experience throughout the country, “hands down, Salt Lake City is the best district of any union I have ever worked in, and I credit that to an outstanding district rep.”

Diston even returns calls on the weekends and came to his jobsite on a few Saturdays.

“He’s a good man,” Jiles said.

He’s also a busy one. Diston serves as a Local 3 Trustee, working with a group to manage the entire state’s active and Retiree Pension Funds and Health and Welfare Funds, while also covering the union’s business, which includes negotiations, grievances and membership representation.

The job is necessary, explains Diston.

“Without unions, there would be no middle class – there would only be rich and poor,” he said. “Unions help the organized as well as the unorganized by helping maintain the middle class and allowing our members to retire with dignity.”

Retiree Post

The Birdman

By Jamie Johnston, associate editor

How have you been spending your retirement? District 80 Retiree Dale Southern e-mailed us to let us know.

“I have been retired now for 18 years,” wrote the 52-year member and former oiler. “Eleven years ago, I got an offer on my house I couldn’t refuse. So I started living in a motorhome and camping out in the deserts and forests of the West and riding a dirt bike and taking photos of birds. I go to Oregon and Idaho in the summer and work my way to Arizona in the winter. This year I went to Texas and Florida to do something different.”

An obvious bird enthusiast, Southern has photographed what seems like a bazillion of them. He’s caught a Red-shouldered Hawk going in for some prey in Florida, Avocets taking a dip in a Nevada hot spring and even a not-so-happy Osprey who “didn’t like me getting its nest on my KTM dirt bike.” He’s shot a Yellow-humped Warbler taking a bath, Spotted Sandpipers strolling along the West Coast and a Green Heron up close and personal in the Sunshine State. His most recent pictures include an American Goldfinch, a Turkey Vulture and a Vermilion Flycatcher, shot just last month.

Typically taken with a Nikon D90 or D7000, Southern’s photos are quite remarkable, but he doesn’t try to sell them.

“I have a good enough retirement that I don’t have to try to make money on them,” he wrote. “Thank Local 3 for the Pension.”

His impressive collection can be found online (www.flickr.com/photos/dalesbirds/), and he also posts his whereabouts, so family and friends know where he is as he travels across the country. But come next month, he won’t need to check in, because there’s no question where he’ll be.

“See you at the Retiree Picnic, which I never miss,” he wrote.

Retiree Dale Southern stands next to his trusty KTM dirt bike in the desert sun in Arizona.

““This is one of my latest,” explains photographer Retiree Dale Southern. “A Red-shouldered Hawk taken in Florida.”

“This photo of Avocets was taken at a hot spring in Nevada,” writes photographer/Retiree Dale Southern.
May is National High Blood Pressure Education Month

Sometimes called the “silent assassin,” high blood pressure (hypertension) is the most common cardiovascular disease. Left untreated, it can lead to vision problems as well as heart attacks, strokes and other potentially fatal conditions, including kidney failure. Unfortunately, in the United States alone, more than 30 percent of adults have high blood pressure, and it is the leading cause of stroke and a major cause of heart attack. Have you had yours checked recently?

Blood pressure refers to the force of blood pushing against artery walls as it flows through our bodies. Just like water in a hose, blood fills arteries to a certain capacity. If you have too much water pushing through a garden hose, it can damage the hose. The same is true with high blood pressure – it can threaten healthy arteries.

Be sure to see your doctor about your blood pressure. If your blood pressure is high, learn what you can do to get it under control.

New value-based program offered yearly

In order to address the many cost variations that exist in California for elective outpatient procedures and other surgeries, the Trustees and Anthem Blue Cross have introduced a value-based program for active and retired members enrolled in the Comprehensive Medical Plan to keep certain out-of-pocket costs down, while limiting overall increases.

Colonoscopies, arthroscopies and cataract surgeries can be more expensive when performed in an outpatient hospital versus an Ambulatory Surgical Center (ASC). If you have these procedures done at an ASC, you are assured of quality care by people who specialize in them, and you won’t have to pay potentially higher out-of-pocket expenses.

Payment by the Plan for the following procedures when received in an outpatient hospital is now limited to:

- Colonoscopy $1,500
- Arthroscopy $6,000
- Cataract surgery $2,000

You will be responsible for any amount above these limits. However, if your surgeon believes it is medically necessary to have one of these procedures done in an outpatient hospital, an exception will be granted and the payment limits stated above will not apply.

Hipp and knee replacements will be limited to a $30,000 maximum cost for a single hip or knee. This maximum includes all inpatient-facility costs but does not include professional fees, such as those for an anesthesiologist or surgeon.

Anthem Blue Cross has identified 52 facilities throughout California where these surgeries can be performed with little to no out-of-pocket costs beyond the Plan’s deductible and co-insurance.

For more information about the new program, refer to the letter you received in December or visit www.oe3trustfunds.org. You can also call the Trust Fund Office at (800) 251-5014 or (510) 433-4422.

Health Dynamics offers new debit card

Health Dynamics provides California active and retired participants and spouses a thorough health screening designed to assess their health status and risks. The primary objective is the early detection of potential health issues and the reduction of preventable illnesses.

The Trustees encourage all eligible members and spouses enrolled in the Comprehensive Medical Plan to participate in the Health Dynamics exam. (The offer does not include Kaiser or Health Net Members.)

Upon completion of the screening, you will receive a confidential report, which will address health-risk scores and provide explanations and recommendations to review with your doctor.

The program is 100 percent paid for. You may take advantage of it once every calendar year without a co-pay or deductible. It’s covered in addition to your preventive-care benefit under the Comprehensive Medical Plan.

As an incentive to participate, you’ll be issued a $250 prepaid debit card, which can be used for any medical-related expenses (co-payments, over-the-counter drugs, dental, optical, etc.).

Take advantage of this great opportunity – free preventive care and $250! Make your appointment today!

Visit the Trust Fund’s website at www.oe3trustfunds.org for more information about health and Pension benefits. Visit www.oe3.org to get online copies of the Engineers News you might have missed.

To schedule an appointment for a free health screening from Health Dynamics, please call one of the providers listed below:

Member wins chance to try Google’s new hands-free, wearable device

By Jamie Johnston, associate editor

The days of simply saying something and having it happen are really here. Well, for 19-year member Ken Lynch they are. The drill operator is one of a select group of people who won an opportunity to try out Google Glass, the newest breakthrough in technology that, shaped like a pair of glasses, allows users to speak a command, like “take a picture,” “give directions” and “send a message,” and it happens, from anywhere in the country, completely hands-free.

More than 30,000 people applied to be a part of the Google Glass Explorer Program and sample this high-tech device at least a year before it’s offered to the general public, and Lynch was one of 8,000 who won the chance. He received the good news on March 27.

Lynch was picked through a national, seven-day contest offered through Twitter, explained his wife, Juli. To enter, applicants had to answer one question: What would you do if you had Glass? Juli could think of a million things her husband could do while working in the field all over the country, often times away from an office, but she didn’t know exactly how to put it into the required 50 characters or less. She was also on a time crunch, so she and the couple’s 14-year-old daughter, Alayna, simply wrote “Need hands!” and sent four pictures that Lynch took on the job.

One of the photos was from a post-tensioning project he worked on in Fort Bragg, Calif. (District 10), and it showed a fellow Local 3 member operating a concrete waler for Condon-Johnson just feet from the edge of a cliff that stuck out over the ocean.

“We had four minutes to spare to hit click and enter the submission,” Juli said.

The drama that came with entering the contest was worth it, because Lynch should pick up his Google Glass sometime soon.

“They’re just amazing,” said Juli, who laughed when remembering the days that electric typewriters were the next big thing. “We were so excited when we found out he was chosen. We were jumping up and down at home.”

Her husband’s excited too but admits he has some reservations.

“It’s kind of funny, you know, because these gadget-guys are beside themselves about winning, and I’m a bit nervous actually,” he said from a jobsite in Portland, Ore., where he and a crew are currently putting in high-capacity tie-backs on a bridge for an existing landslide area. “I’m not what you call real tech-savvy.”

However, with the simplicity of Google Glass’ voice-recognition system, he’s hoping to become more so without having to do much, like “operate a keyboard.”

“I’m hoping it’s that easy,” he said.

Lynch first joined Local 3 in 1994, when he worked at the Chevron Refinery in Richmond. For a good 10 years, he worked “pretty steady in the Bay Area,” but today, he’s “generally not in one spot for too long.” He’s traveled with Northwest Cascade, Inc. to projects all over the country, from Montana to Alaska, which is one of the main reasons Lynch is excited about getting Google Glass.

“Obviously the possibilities are endless,” he said. “Myself, I travel extensively. We’re all over the West Coast. Any issues that arise, we can show in real time what’s happening on a site.”

He’s also away from his family a lot and is hoping this new device helps him keep in touch. We hope it keeps him in touch with us too! He did say he’d try to read the Engineers News from the job!
