LWProtthe membership of Operating Engineers Local No. 3 will shortly be asked to approve modifications of the Hiring Procedure. Back in 1968 the membership ratified the Master Agreement negotiated with the Northern and the Associated General Contractors containing an exclusive hiring procedure. For some time these provisions were administered by the Business Representatives and the Dockers, exercising their best judgment as to the qualifications of the various members to perform work as requested by the contractors with whom we deal.

This seemed to be a rather satisfactory method to run a Hiring Hall, whereby we received the minimum number of complaints, and the members were able to be sent to jobs closer to home as their names came to the fore of the work list.

Then came two pre-vested situations. First, the decision that the Brown-Olensky Company and the elderly as the Mt. Lassen Pacific Case. Effect of this decision was that in order for our union to stay in business without spending all its treasury to defend against law suits that were shored up by bifurcation of the law. This was, in essence, an unbalanced law of the 1969-62 agreement which is currently in force.

But as often happens, your officers found that this modifi
cation still did not meet all of the requirements that our mem-
bership would like to have and (Continued on Page 13)

Schedule of Special Meetings
On Modification of Hiring Rules
San Francisco 8:00 P.M. March 9, 1961, Thursday

Stockton 8:00 P.M. March 12, 1961, Monday

File Immediately for Supplemental Benefits
SACRAMENTO - An urgent notice to unemployed workers who may be eligible for extended unemployment insurance benefits was sent out this week by the California Labor Federation.

The theme of the message is to file as soon as possible, to insist that the application be completed and perfected and to inform the Department of Employment of all changes of address. The Department in May will begin to notify claimants of their eligibility for extended benefits.

Eligible for file for extended benefits is anyone who has exhausted his regular unemployment insurance benefits and is unable to accept a regular claim because of insufficient earnings.

If the individual is in doubt as to his eligibility, the State Federation recommends that he apply to a Dept. of Employment of office and file a claim.

If the Department interviewee refuses to accept the claim, ask for a written determination and file an appeal.

Even a claimant who has been declared ineligible because of the so-called "lax quarter" rule can file, since he may be entitled to the extended benefits.

The Department started processing claims Feb. 28 with an effective date of Feb. 25.

It's Weather, Not the Slump in San Mateo

BY BILL RANEX AND DANNY MATTISON, Business Representatives

Construction work in San Mateo County, like most areas, is at a low ebb, but, we believe, for different reasons. The rest of the Nation is admittedly in an economic recession, and this of course has its effects on San Mateo. However, the primary reason for there being so little dirt work is that the small contractors completed their small work before the rain started, leaving few if any jobs being worked on that is being let continuously.

As previously reported in earlier issues, there are many major construction projects to be started this year. We fully expect that there is more money available in the County. In 1951, than ever before in San Mateo County. It is hoped that contracts will be let for work to be done within the next two months, so that the small contractors will have to tighten up their belts a notch or two.

The Pacific land reclamation project on Breuer Island has brought about some multi-million dollar contracts. These contracts are in the neighborhood of twelve million to thirty-seven million dollars for imported fill. The Contractor from Chicago submitted the lowest bid, and it is expected that they will qualify their bid so that it may not be acceptable. At this writing, the project is yet unknown, and no contract has been awarded. Utah Construction Company, the bids on a dry fill has bid at a bid of $71,711.40. With this write it is not yet known that the bid will be used. The entire Breuer Island project will cost approximately one R0SE BILLION DOLLARS, before it is finished. This again emphasizes the fact that the Contractor will employ a great many people here in San Mateo County.

The 19th Ave. extension is still just barely getting started. Work will start only after the demolition of houses going on now. This is a rather expensive job at Stanford is not moving and there will probably be no activity at Stanford for some months yet. Apparently there is far more planning to do before the houses are moved than is going on now.

Charles Harney’s air port job will no doubt be held up until Nick Bickelow is finished with his land. The city of San Bruno will not allow any more add-on jobs at the airport, which means that Harney may not get going until later.

Bids are in for the College Heights Campus, and were a big surprise as the bids were approximately ONE MILLION DOLLARS UNDER THE ABO four (4) bids. Theodore Meyer & Son from San Francisco put in the low bid at $7,407.74. The architect’s estimate was $6,534,160. The bids were under in line with a $7,768,490 contract will be awarded to the low bidder on all bids have been reviewed.

Bids are also in for the construction of Bob’s Ranch, near La Honda, with the J. W. M. of Woodside to receive a contract for about $137,000. Low bidders with Fino Construction of Redwood City, with a low of $131,750. Contract has not yet been awarded.

An improvement approval for the purchase of a 3 acre site for San Mateo’s new Post Office, together with the next to San Mateo Delavigne and Garvas, St., to 55th Ave. More to follow on this.

Plans for a $150,000 center for the San Mateo County Historical Society in Linda Mar were approved by the planning commission and will be bid in the very near future.

E. T. Blass awarded the contract for surfacing and gutter work on Westlake Ave. Daly City.

J. W. M. awarded the contract for surfacing and gutter work on Westlake Ave. Daly City.

City of California, Division of Highway is calling for bids for surfacing and gutter, and cement, concrete and gutters, and gutters, and cement, concrete and gutters, on the line between Avenado and Meetea Aves. in Menlo Park. Bids are asked and will be opened at 10 a.m. on April 16.

Plans are in the offering and contractors to be named later for a contract at Skyline Memorial Hospital on Skyline Blvd. and Bitney Springs Rd. in Menlo Park. Bids are asked and will be opened at 10 a.m. on April 16.

The Business Representatives have been busy getting new companies in associated fields, as well as handling disputes and enforcing contracts. The Fifth Avenue

SOME DEMOLITION IN S.F.,
BUT NOTHING GOING UP

BY PAUL EDDICOMBE, JERRY DOWD and GEORGE BAKER

Business Representatives

In the past few months we have had to deal with many contractors from hitting high voltage lines. These accidents have needed considerable expense, and have caused thousand of dol-

ors damage to equipment and material.

We want to call to this attention, to help prevent such accidents, and let us know if your em-

ployer is asking you to work near high voltage lines, we do so, we ask you to refuse and tell us of it, we will do our best to take care of it. It is a legal code that involves the liability of an employer who is working too close to these lines. We must all get to stay out of these areas unless your help is needed in this.

In the past month we attended the

Governor’s Safety Conference in Los Angeles. We felt that we had an opportunity to discuss the things discussed and acted on the best interest of real members to all of our members.

There are several changes in the safety regulations that are working on and hope to have some program to report to you in the next issue. We work in tunnels will be included in these changes coming up, within the next 30 days, in the form of a bill.

In the past month we have heard nothing of the progress of the districts and have been able to import many of the jobs and keep many contractors on the job.

Once again, we want to say that we have been notified of many problems very soon after they were called to our attention by some of us remember "Look Up and Live," stay clear of high voltage wires.

San Mateo Health City is still under construction and was open seven days a week. Here is the place to get your "61." It has been well taken care of and the buildings have been occupied.

We have had many requests for work in this area and are always happy to assist any workers in these areas to service you, so give them your exclusive support. It is no use getting the work for you.

We have had many requests for work in this area and are always happy to assist any workers in these areas to service you, so give them your exclusive support. It is no use getting the work for you.

San Mateo office is quite heavy at this time. We have been holding so good, many of the contractors are getting a little un- comfortable. We will work together.

STILL, FEBRUARY, a time when ordinarily you are out of work. All we can do is hold on, and very shortly we will be back in the running again.

Work in the Fresno area has continued to be scarce during the past month, and our out of work list is still heavy.

Beginning with the latter part of March, however, the situation is starting to change as construction projects that will get under way after Easter will begin to be scheduled for the month of March. If all goes as scheduled, there will be several major projects that will get under way after Easter, which will improve the situation in the Fresno area.

Rock Plants and Hot Plants.

At the various rock and hot plants in this area work has been very slow. The last month and a half has been the slowest in the entire past year. We have now completed our schedule for this month and will begin to feel a little better when we start to get some new work. This is a very critical time for the industry, as we are in a period of high demand for construction materials. We are trying to keep the supply of materials up to meet the demand, but we are facing some challenges with the availability of materials.

Early Spring Forecast—Redding
Hopes for Jobs to Break Soon

By J. B. Kennings, S. N. McYoung and W. Brooks
Business Representatives

Major construction projects will start early this year according to reliable sources.

Although we have had an extremely dry winter, the first major construction work will start early this summer in Redding. TRINITY PROJECT TO START

A contract to let is awarded to Gibbons & Reed. Their bid of $69,460 includes the construction of a new river channel below Trinity Dam, which will be opened in the fall. The Lake City mill is already engaged in construction and is expected to be operating and relocating Highway 99W on the Trinity River project. The Bureau's estimate for the dam was submitted by the George W. Powell of Keswick. Highest bid for the dam was $155,670. It was entered by the Keswick Power Co. of Redding. The Bureau's estimate for the dam was $155,670. It was entered by the Keswick Power Co. of Redding.

Rigs Start to Move At San Rafael

By J. F. LAWRENCE
Business Representative

Since last month's report, there has been an improvement in the situation. There is now starting to move all over the city. The City Council has raised the road level in several parts of the city. The old gravel road has been replaced with asphalt. The city is expanding the existing sewer system to serve all parts of the city.

The City Council has approved the construction of a new sewer system. The work will start in the near future. The city is also beginning to build a new water treatment plant. The project is expected to be completed next year.

Moreover, the city has received a grant from the state government to improve the local schools. The funds will be used to construct new classrooms and update the existing ones.

The city is also planning to build a new library and a community center. These projects are expected to be completed in the next few years.

To ensure the safety of the public, the city has implemented a new traffic management plan. The plan includes the installation of traffic lights and speed cameras in strategic locations.

The city is also working on improving the local parks and recreational areas. The projects are expected to enhance the quality of life for its residents.

Overall, the city is making significant strides in improving its infrastructure and providing better services to its residents.
The report from this district for February is rather limited. With most of the jobs having been completed prior to this month, we have very little to report. However, we leave little to report at this time, having experienced every year at this time, the contractor on the Redwood Tunnel Project is making good progress on the lower tunnel, with the latest information we have received, the concrete is being delivered at the site daily, and the work to be completed by the end of May.

The Granite Construction Co. on State Route 4, between Redwood City and Mill City, has been operating an intermittent 110-ton crane to move large boulders to between rainstorms. However, this data has been received and used to good effect in the construction of the new highway.

In the Modesto area work is at its lowest ebb. The only significant news was the completion of the highway, which is now open for business. The new highway will not employ many of our members on a regular basis. However, the situation will improve as the winter months approach. The highway, which was completed in November, is now open for business. The new highway will not employ many of our members on a regular basis.

"Lest we forget," we, Stockton members, are still interested in the Pacific Blood Bank.

BLOODY BANK

The Stockton Chautauqua is making the prize of the Stockton members this month for his contribution to the Pacific Blood Bank. He has been a regular contributor and has been a leader in the local chapter. His dedication to the cause is always evident.

PERSONAL NOTES

The following changes are extended to the family of our late brother William Barlow, who was a member of our local chapter. He passed away on January 22nd.

Brother Joe Dobb has recently purchased a new brick factory in Oakdale at 701 Yosemite Street. He is expanding his business in that area and is expected to open his factory in the near future.

The Bob-A-Book Publishing Company has been awarded a contract for the production of a new book on construction techniques. This book will be used in the classroom and in the field by students and professionals alike.

The turnpike, which is expected to be completed by the end of the year, is making good progress. The contractor, Ralph Turner, has been working on the project for several months and is expected to finish by the end of the year.

The Redwood Tunnel Project is making good progress. The contractor, Ralph Turner, has been working on the project for several months and is expected to finish by the end of the year.
Brothers, we are keeping our fingers crossed in hopes that the weather will continue. The ground has dried out quite a bit and we figure the rain will hold off for a while so we will be able to get quite a few men out of the cut of work list and on the jobs.

There are two manholes in the downtown area of Sac-ramento, CA. One is being worked on by Weiser Construction Co., Inc. and the other by the Sacramento Water Department. The former is on the corner of 16th and I Street and the latter is on the corner of 18th and I Street. The manholes are being set up and con-crete is being poured around them.

MARCH, 1961
ENGINEERS NEWS
PAGE ELEVEN

Walla Walla was hanged.

MARCH 1961 - Approximately 825 of our State, thirteenth day of July, 1910.

Brothers, we are happy to report the last two weeks of February the weatherman has given us a much needed rain. It is one of the best
news of some of our jobs will be starting up, thus putting some of you brothers back to work.

There have been 71 men cleared from this office so far this month and there are still approx-
mately 103 men available.

In the past two weeks we have moved up to Meridian, Washington, for the benefit of
Your Marysville District office. We hope this will give you all a good start. This office is a
area much faster and more efficient service.

The sign contract was awarded in March, awarded in May, and the actual construction started in
August, 1961. Since that time many of our brothers have been employing their talents. The work includes:
water control — water conserva-
tion, creation of a large area of the old South Dam Diversion of the Skagit River has been re-
ously changed. The dam will be
over the old diversion structure.

Aside from some of the stover storms we’ve had work, work, work has been the order of the day. We are
able to push the job on or ahead of schedule.

Time and timber have been cleared from the creekbeds from which mill material for the dam is
obtained. The river channel has been widened on both sides of the creek. The rock that
was gorged out for the amount of dam material.

Gravel nearly 360,000 cubic yards of material have been placed and compacted to form the face of the dam. One-fifth of this is impervious material, the other four-fifths is the core of the structure.

Continental Drilling Co., of Phoenix, Utah, has been working on land in the immediate vicinity of the dam. The purpose of this work is to further secure the abutments of the dam. Cement will be
placed in the holes under
use to form the whole of the dam.

Case, Hood & Foster, joint venture contractors, have been working on the outlet structure inboard of the dam. The outlet structure is under way.

Many of what had been intended as tunnel at the south end of the dam has been changed to open trench and two additional tunnels have been added to the part of the job. The channel, fork, with one arm leading down to the dam and one fork leading to the control works, and the other releases into the middle of the Project’s south channel.

Several miles of the Old New Levee, which is the bank of the Skagit River, have been salvaged. The Black Butte Dam is consis-
tent road along the Graveyard

Special Notice to Members on Check-Off Only:

To the Friends and Brothers of Otis Thornsberry:

We, Otis Thornsberry and Family, would like to express our sincere thanks and appreciation to the electrical
organizations for the floral pieces, donations and show of friendship. It has been a very comforting experience to be assured such a great deal toward using the burden of the loss.

We regret that we are unable to extend our heartfelt thanks to everyone who supported Otis’s wishes to be buried with his family and his beloved home in the Valley. We were able to reach by this message and will understand that we are helping Otis and the family to feel that he was not forgotten in his time of need.

We are so happy to have been a part of this for so many years and will treasure always the friendships with the dele-
ration for a large number of our members.

At the time of Otis’s passing, we had the privilege of
in his home and his beloved home in the Valley. We were able to reach by this message and will understand that we are helping Otis and the family to feel that he was not forgotten in his time of need.

Santa Rosa-Utah

Sun Shines, But Ground Is Still Saturated

Santa Rosa-Utah—Sunny but still "saturated."

Brothers, who are on this writing again, are shining and there is quite a bit of activity expected for the next few "hot" days soon. One solid week of sun is not enough to dry up ground water which is still well saturated even though it may be on the workable surface. All we can do is hope that this good weather holds.

OUT OF WORK LIST

The only activity so far is registration on the out of work list.

Calls for operators have been at a standstill so far for this year. As we call the Brothers attention to the fact that they must register on the list of workers they wish to hold their place. According to the "Hiring Regulations," re-registration can take place any time from the 70th to the 85th day after their original registration. So please send us in a card so that you will not drop off the out-of-work list.

In the last issue we mention a couple of jobs that were due for bid. One project was that of dredging a channel in Bodega Bay. The Shillermark Co. from San Francisco was the low bidder for an amount of $175,000, which was about $65,000 under the estimate. An Aqueduct job was also bid, and the Galistrath Construction Co. of Baywood was the low bidder at $72,000.

As of this date we have not had a proper conference with either of the above mentioned companies, but it is expected this may take place this month on this particular job.

Kirkwood-Bay were low bidders at $25,000 for road work looking under the roads in Kirkwood. This project is a month or a little more, and a lot of subdivisions and small jobs are expected to be bid on this month, so be on the lookout for activity among the engineering staffs of the local contractor.

DISABLED REFUND

Brothers, there are many of you who are working under the unemployment insurance and are not collecting your benefits. We have the necessary forms in the office, but you can also do your own at the employment office. They send a return if you do not return it. This refund is June 30, 1961.

We are here to report that just about everyone on our list is now on the road to recovery and putting "spring fever" behind them.

BLOOD DONOR PROGRAM

We congratulate Brothers Charles Thomas and Jim Yakimoff in the donation of blood to our blood bank this month. The supply is low and will remain so for quite some time, so that the extra time that you have, please accept the request to come in and make an appointment with the Blood Bank. It will certainly be appreciated.

SPECIAL MEETING NOTICE

There will be a special meeting at Moore Hall, 231 - 3rd St. Santa Rosa, for the presentation of the Modification of the Charter. This meeting will be at 8 p.m., March 22, 1961.

Al Rains is Elected as Director 11

Candidate

Al Rains

in our opinion, the forecasting accurately presents the results of the election.

Price Waterhouse & Co.

PAYMENT OF DUES

Many thanks to those members who have submitted their dues for the past few months, but it is expected that more will be due now. All we can do is hope that the
